
(a) size and surface brightness
$\mu_{\rm eff}(g)$ (mag arcsec^{-2})
$r_{\rm eff}$ (arcsec)
entries per cell
(b) observed colours
$r-z$
$g-r$
entries per cell
(c) photometric redshifts, by source
Legacy Surveys photo-z
our estimator
entries per 0.02 in z
$z_{\rm phot}$
(d) size and stellar mass, $z<0.2$
$\log(r_{\rm eff}/{\rm kpc})$
$\log(M_\star/M_\odot)$
entries per cell
